About Me

Spending my free time building my new app: LET Reviewer using latest technologies available for Android development. I love to explore tools and APIs that would help me architect apps better including Kotlin's new Flow: StateFlow & SharedFlow. Jetpack also released Android Hilt, a Dagger 2's replacement for DI. Together with ViewModel and Flow, I can write apps faster and much more safer from errors. I'm also trying out Firebase APIs such as Firestore as my NoSQL backend DB. When it comes to pattern, I like to write in accordance to Clean Architecture design pattern to for testing and maintainability of the app.

Education

Polytechnic University of the Philippines
Diploma in Information Technology
2008 - 2012
NDC Compound Pureza St., Sta. Mesa, Manila
